

CSCI-6461 Computer System Architecture

PROJECT - Part Two – Simulator

Designed by TEAM 6

Owen Chibanda

Deepika Kubendra Rao

Nongxu Li

Execution Instructions

To successfully run the simulator, follow these steps:

1. Ensure Java is Installed

- Verify that you have an updated version of Java installed on your system.

2. Download and Extract Files

- Obtain the ZIP file containing the necessary components.
- Extract both Project1.txt and the JAR file to the same directory.

3. Run the Simulator

- Open a Terminal or Command Prompt.
- Execute the following command:

```
java -jar Simulator.jar
```

4. Load the Input File

- Once the application launches, click the IPL button.
- A file selection dialog will appear.
- Choose Project1.txt and click Open.
- A confirmation message will indicate a successful file load.

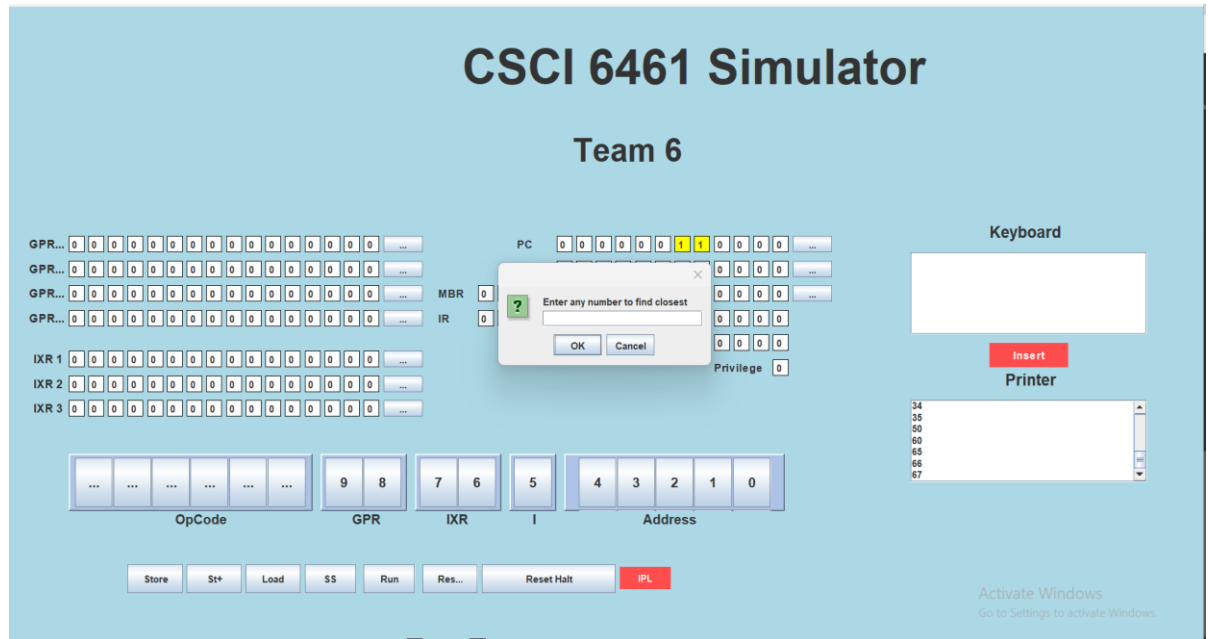

5. Enter Data

- Input up to 20 values using the Keyboard section.
- Click Insert to add them.

6. Find the Closest Value

- After entering 20 numbers, the application will prompt you to enter a target number.

- Input the number into the pop-up panel.
- The system will compute and display the closest matching value among the provided inputs.

Example:

- If you enter 100, and the closest number among the set is 67, the result will be displayed on the Printer screen.
